1 [Demonstrations: FACET: thesaurus retrieval with semantic term expansion](#)

Douglas Tudhope, Ceri Binding, Dorothee Blocks, Daniel Cunliffe

 July 2002 **Proceedings of the 2nd ACM/IEEE-CS joint conference on Digital libraries JCDL '02**

Publisher: ACM Press

 Full text available: pdf(135.85 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

There are many advantages for Digital Libraries in indexing with classifications or thesauri, but some current disincentive in the lack of flexible retrieval tools that deal with compound descriptors. This demonstration of a research prototype illustrates a matching function for compound descriptors, or multi-concept subject headings, that does not rely on exact matching but incorporates term expansion via thesaurus semantic relationships to produce ranked results that take account of missing an ...

2 [Abstracts for short papers: computation linguistics: Searching on full name providing for spelling variations](#)

Gideon de V. de Kock

 September 2002 **Proceedings of the 2002 annual research conference of the South African institute of computer scientists and information technologists on Enablement through technology SAICSIT '02**

Publisher: South African Institute for Computer Scientists and Information Technologists

 Full text available: pdf(101.03 KB) Additional Information: [full citation](#), [abstract](#), [index terms](#)

The term *<i>full name</i>* is used for a surname plus zero or more forenames (first names) of a person. Searching a large database which contains at least the full name of an individual and the date of birth, e.g. in our case a genealogical database containing about 525 000 person records, could be problematic and is discussed in this paper. The full name recorded may not be exact or complete, and dates may also not be accurate and could in some cases be estimates. The disc ...

1 Information retrieval systems as integration platforms for language technologies

Douglas W. Oard

May 2003 **Proceedings of the 2003 Conference of the North American Chapter of the Association for Computational Linguistics on Human Language Technology: Tutorials - Volume 5 NAACL '03**

Publisher: Association for Computational Linguistics

Full text available: [pdf\(123.89 KB\)](#) Additional Information: [full citation](#), [abstract](#)

At one time it might have been possible to think of natural language processing, speech processing and information retrieval as separate fields, but an increasing degree of interdependence is now clearly evident. This tutorial will explore those connections from the perspective of information retrieval system design. An overarching framework for interactive retrieval will be introduced, and then specialized to describe Web search, cross-language retrieval, and retrieval from spoken word collecti ...

1 [Hunger for new technologies, metrics, and spatiotemporal models in functional](#)

[genomic \(abstract only\)](#)

George Church

April 2001

**Proceedings of the fifth annual international conference on Computational
biology RECOMB '01**

Publisher: ACM Press

Full text available: pdf(36.48 KB) Additional Information: [full citation](#), [abstract](#), [index terms](#)

Functional genomics, as a field, is applying genomic self-improvement protocols (cost-effective, comprehensive, precise, accurate, and useful) to the kinetics of complex cellular systems. Radical surgery in functional biology aims to mimic the success of structural biology along all five of those axes. Technologies of recombinant DNA and automation have brought costs down exponentially (100-fold in ten years) in structural studies. That combined with definitions of completeness push the secon ...

SEARCH

Nothing Found

Your search for **+abstract:search +abstract:separate +abstract:application +abstract:display** did not return any results.

You may want to try an [Advanced Search](#) for additional options.

Please review the [Quick Tips](#) below or for more information see the [Search Tips](#).

Quick Tips

- Enter your search terms in lower case with a space between the terms.

sales offices

You can also enter a full question or concept in plain language.

Where are the sales offices?

- Capitalize proper nouns to search for specific people, places, or products.

John Colter, Netscape Navigator

- Enclose a phrase in double quotes to search for that exact phrase.

"museum of natural history" "museum of modern art"

- Narrow your searches by using a + if a search term must appear on a page.

museum +art

- Exclude pages by using a - if a search term must not appear on a page.

museum -Paris

Combine these techniques to create a specific search query. The better your description of the information you want, the more relevant your results will be.

museum +"natural history" dinosaur -Chicago

1 Pasta-3: a graphical direct manipulation interface for knowledge base management

systems

Michel Kuntz

May 1990 **ACM SIGMOD Record , Proceedings of the 1990 ACM SIGMOD international conference on Management of data SIGMOD '90**, Volume 19 Issue 2

Publisher: ACM Press

Full text available: pdf(117.21 KB) Additional Information: [full citation](#), [abstract](#), [index terms](#)

Pasta-3 is an end-user interface for D/KBMSs based on the graphical Direct Manipulation (DM) interaction paradigm, which relies on a bit-mapped, multi-window screen and a mouse to implement clickable icons as the main representation of information. This style of interaction enables end users to learn quickly and remember easily how the system works. Pasta-3 gives complete access to the D/KBMS, since its users can carry out all manipulation tasks through it schema definition, schema and data ...
